

DINOX

Solid with a contemporary look

INTOS recently developed a new standard counter based on market needs, both nationally and internationally. There was a need for a standard counter in which a wide variety of rich materials could be processed so that each airport could give its own twist to the appearance of the counter, but which was also strong and had an accessible price. The DINOX is particularly interesting for airports that are looking for a decent counter with a contemporary look.

Durable and versatile

The DINOX counter is a durable and versatile counter. The counter consists of high-quality fiber plates that can be finished in different colors. The front can be finished with an HPL (in any color or pattern) or with a back-painted glass front, the back of which is painted in a chosen color. The front and sides have a protective corner and stainless steel plinth. The top can be finished with solid surface or composite available in many different colors and patterns.

Various application possibilities

Like all other INTOS counters, the DINOX has been developed in such a way that the desk can be used for various purposes, such as:

- ▶ check-in counter
- ▶ information counter
- ▶ transfer counter
- ▶ passport desk
- ▶ service counter

Various setups possible

The DINOX offers various options and can be built in any conceivable arrangement. As an individual counter, as a double counter, in a row or even in every conceivable island arrangement

Why choose DINOX?

- ▶ versatility of materials possible
- ▶ sturdy and durable
- ▶ competitively priced
- ▶ standard concept with a customized look
- ▶ can be used for various setups

The DINOX counter range is available in different counter types from passport control till boarding gate and everything in between. This ensures a consistent look & feel throughout the complete terminal. The DINOX counter range has proven its quality and functionality on various airports.

Impression of possible color options
